Hiring Manager, Asset & Wealth Management — Transformation & Analytics

JPMorgan Chase & Co. | Bengaluru / Mumbai, India

Re: Data Science & LLM Developer — Job ID 210703293

Dear Hiring Manager,

I am writing to express my strong interest in the Data Science and LLM Developer role within JPMorgan Chase's Asset & Wealth Management Transformation and Analytics team. As a final-year B.Tech Computer Science student at Manipal University Jaipur, with direct industry experience in LLM development, agentic AI, and data analytics, I am excited to contribute to a firm at the forefront of financial and technological innovation.

During my tenure as a Full Stack & AI Developer at AgriCart Farmtech, I fine-tuned large language models on domain-specific datasets and built an AI-powered conversational agent deployed in production — directly aligning with your requirements for LLM frameworks and agentic AI deployment. I also designed end-to-end data pipelines, collecting, cleaning, and structuring unstructured data to drive model performance, mirroring your need for transforming raw data into actionable information.

My project portfolio reflects the breadth of skills your team demands. I have built NLP classifiers using BERT, applied explainable AI for healthcare diagnostics, and conducted comparative research on Vision Transformers versus CNNs. My proficiency in Power BI, Tableau, and Python (Pandas, Scikit-learn) positions me well for the EDA and data storytelling responsibilities central to this role.

I am particularly excited about JPMorgan's emphasis on Generative AI and Agentic AI architectures. Having worked with LangChain, RAG-based pipelines, and agentic patterns both professionally and in independent research, I am eager to architect scalable Gen AI solutions in a high-impact financial services environment. I would welcome the opportunity to discuss how my background aligns with your team's goals. Thank you for your consideration.

Yours sincerely,

Harshwardhan Pandey
